Data Preparation.

There are several steps that we will performed on this stage:

a) Download and read the dataset.
b) Check for missing values (not nulls).
c) Standarized Data: decide how to delete, replace or calculate missing values using our common sense - due to the lack of Stakeholders or Product Owners availability who in reality can give a more accurate way on how to proceed with this task from a business perspective.
d) Select target variable, "Severity Code" will be the target variable.
e) Visualization tools: create graphs or tables that will help us to understand behavior and relationships if any
